Transferring Knowledge to the University Sector:  
**Best practices for a socially responsible extractive sector**

This innovative approach is designed to build capacity in national and regional universities operating in resource rich countries by working with university teachers and post graduate students.

The Centre for Social Responsibility at The University of Queensland provides access to 10 flexible modules of teaching related to key areas in social responsibility in the extractives and teaches staff how to deliver this content.

Each module includes:

- One video by a CSRM expert
- Questions and teaching notes for video
- Summary of key issues
- Case studies for teaching

We work with university staff to develop, adapt and deliver the content to their specific country content.

We train the teachers in effective and modern teaching practice.

We shadow and mentor their performance as they deliver a series of Master Classes of the materials to their students.

*Teaching the next generation about best practice in the extractives*

*Adapting international best practice to local contexts and university curriculum to manage change in more effective ways.*
